

Sean's Explanation

Sept. 28, 2012

I think the inside of the box looks like this:

barrier made of something
soft like cardboard.

metal ball—maybe
iron, steel or nickel.

My explanation:

The sketch above shows what I think is inside the box. I think it has a cardboard barrier because I hear the ball hitting something before it gets to the end of the box. I can also "feel" the barrier with the skewer and it feels like the cardboard box. I think the box also has a metal ball because I hear it rolling. I think the ball is metal because it is attracted to a magnet. Magnets are attracted to some metal objects.
